### Programme Highlight:

Building energy efficiency has been a growing concern to the society and HKSAR Government is actively pursuing the mandatory implementation of building energy codes. Meanwhile, there is also a more apparent expectation of the community towards sustainable construction. Achieving energy conservation targets and in a wider perspective sustainable construction has been a great challenge to building services engineers responsible for the design, operation and maintenance of building services systems. Building Services Engineers will have to address these issues in the coming decades. This one-day seminar hosted by the HK Branch of CIBSE will attempt to highlight some important issues within these challenges including UK / European building regulations, energy saving measures, and introduction to CIBSE Guide L on Sustainability.
